

# GENETIC

Ex: 70, 80, 90, 100, and 110mm lengths available

The AQ stem was developed as a classic style stem and is not recommended for use on carbon steerers. The minimum steerer length needed above your headset is 65mm.

The torque noted for the main binder is *maximum* 11Nm, but follow the clamping instructions for your fork, which may have a lower clamp force rating.

Ensure that the maximum recommended clamping force for the fork is not exceeded and the stem is held securely from any risk of twisting during use.
